#### Introduction

DateGoWhere is a web application that facilitates the planning of dates with significant others, families, and friends. Users can share their date itineraries on the app's catalogue for others to view and use. Users can also rate other date itineraries in the catalogue, as well as leave their reviews.

#### Use Case Descriptions

Use Case ID:	1.1		
Use Case	Login User		
Name:			
Created By:	Paviru	Last Updated By:	Paviru
Date Created:	03/09/23	Date Last	24/10/23
		Updated:	

Actor:	User (Initiating Actor), Database (User Account Database)
Description:	All Users must log in to their account before they can create
	ideas or review ideas. This is to provide legitimacy and
	accountability of ideas uploaded and the quality of reviews.
Preconditions:	<ol> <li>User has an existing account</li> </ol>
	AND
	2. have not logged in.
Postconditions:	User successfully logs in.
Priority:	High. User will need to login to his/her account to be able to
	review, report or upload date ideas.
Frequency of Use:	1 time per session
Flow of Events:	<ol> <li>User inputs their email and password in the</li> </ol>
	respective input boxes or logs in via Google Account.
	2. User clicks "Login".
	3. System submits a POST request with the user's
	credentials for verification with the database.
	4. System checks for existence of email.
	5. System validates password associated with the user's
	email.
	6. System displays "Successful sign in".
	7. System redirects the user to the home page
Alternative Flows:	AF1-S4: Email does not exist:
	System displays "Invalid email, please register"
	2. System returns to step 1. User can choose to try login
	again or click Register instead.
	AF2-S5: Invalid password:
	System displays "Invalid password, if you forgot your
	password, please reset"
	2. System returns to step 1. User can choose to login
	with a different password or click Reset Password
	instead.
Exceptions:	EX-S5 – If User inputs password incorrectly more than 5
	times, the app displays message "Account suspended". A
	reset password email is sent to the registered email, for the
	User to login again.
Includes:	- 
Special Requirements:	User has a registered account in the app database.

Assumptions:	-
Notes and Issues:	-

Use Case ID:	1.2		
Use Case	Register User		
Name:			
Created By:	Paviru	Last Updated By:	Paviru
Date Created:	13/09/23	Date Last	24/10/23
		Updated:	

Actor:	User (Initiating Actor), Database (User Account Database)
Description:	If a user does not have an account registered with the app,
	he is required to register using an email to enable him to
	login for use of review, report and uploading of date ideas.
Preconditions:	<ol> <li>User does not have an existing account</li> </ol>
Postconditions:	User successfully registers an account.
Priority:	Medium. User will need to register an account to gain access
	to features within the app.
Frequency of Use:	1 time per user lifetime.
Flow of Events:	<ol> <li>User clicks "Don't have an account? Register" on Entry Page.</li> </ol>
	2. User inputs "Email" and "Password" respective input
	boxes or registers via Google Account.
	3. User clicks "Register" button.
	4. System submits a POST request with the user's email
	the database for verification with the database.
	5. If email does not exist on the database, system
	performs a check on the password input to determine
	whether it satisfies the conditions: at least 8
	characters long AND contains at least one uppercase
	(A-Z) AND one lowercase (a-z) character, AND any of
	the following special characters:
	(!,@,#,\$,%,^,&,*,(,),_,-,=,+).
	6. If password satisfies the conditions, system submits a
	POST request with the user's email and password to
	add into the database.
	7. System will prompt user "Signed-up successfully"
	upon successful registration.
Allerent's Flags	8. The system redirects the user to the login page
Alternative Flows:	AF3-S5: Email already exists
	System prompts user: "Email is already used, please     login or shoose another amail"
	login or choose another email".
	<ol><li>System returns to step 1. User can either sign up with a different email or go back to login with current</li></ol>
	email.
	Citiali.
	AF1-S6: Password does not meet requirement
	System prompts users: "Please ensure that your
	password consist of at least 8 characters long AND
	. 3

	contains at least one uppercase (A-Z) AND one lowercase (a-z) character, AND any of the following special characters: (!,@,#,\$,%,^,&,*,(,),_,-,=,+)."  2. System returns to step 2.
Exceptions:	-
Includes:	-
Special Requirements:	User email is not registered in the database.
Assumptions:	-
Notes and Issues:	-

Use Case ID:	1.3		
Use Case	Reset password		
Name:

Date Created:	13/09/23	Date Last	24/10/23
		Updated:	

Actor:	User (Initiating Actor), Database (User Account Database)
Description:	If a user is unable to login to his account, he can reset his
	password using his email
Preconditions:	<ol> <li>User has an existing account</li> </ol>
	AND
	2. User is not signed in
Postconditions:	User successfully resets password to account.
Priority:	Low. Only users who has forgotten their password will use
	this feature.
Frequency of Use:	2-3 times per user lifetime.
Flow of Events:	<ol> <li>User clicks "Reset Password" on Entry Page.</li> </ol>
	2. User inputs "Email" in input box.
	3. If email exists in the database, system sends an email
	to user's email.
	4. User clicks on the hyperlink in the email.
	5. User is directed to "Password Reset" page
	6. User inputs "New Password" in input box.
	7. User clicks on "Confirm Password Reset" button.
	8. System performs a check on the password input by
	the user and satisfy the conditions: at least 8
	characters long AND contains at least one uppercase
	(A-Z) AND one lowercase (a-z) character, AND any of
	the following special characters:
	(!,@,#,\$,%,^,&,*,(,),_,-,=,+).
	9. If password is valid, system submits a POST request
	with the user's email and new password for
	verification with the database.
	10. System will successfully modify password in the
	database.
	11. The system redirects the user to the login page
Alternative Flows:	AF-S3: Email does not exist.
	System prompts user: "Email not found please sign
	up"
	2. Redirects user to sign-up page.
	AF-S9: Password does not meet requirement.
	System prompts user: "Please ensure that your
	password satisfy the necessary conditions".
	2. Returns to step 1.

Exceptions:	-
Includes:	-
Special Requirements:	User email is registered in the database.
Assumptions:	-
Notes and Issues:

date is set to public or private.  3. User adds activities to the date idea via individual
3. User adds activities to the date idea via individual
3. User adds activities to the date idea via individual
activity forms.
4. The app processes the various activity locations and
calculates the route using Google Places and Routes
API.
5. User submits the date idea.
6. The app processes the information provided.
7. If uploading is successful, the date idea is added to
the app's database.
8. The app notifies the user of successful upload.
Alternative Flows: AF-S6. If uploading fails (e.g., missing information), the app
displays an error message, and the user is prompted
to correct the details. App returns to Step 2.
Exceptions: -
Includes: 1. Authentication required prior to uploading date idea
Special Requirements: -

Assumptions:	Each location provided for activities are valid locations in Google Places API
Notes and Issues:	-

Use Case ID:	2.2		
Use Case	Browse Date Ideas		
Name:			
Created By:	Paviru	Last Updated By:	Paviru
Date Created:	03/09/23	Date Last	24/10/23
		Updated:	

Actor:	User (Initiating Actor), Database (User Account Database)	
Description:	User can browse various public date ideas. Users can filter	
	date ideas by category tags, keyword and price. Users can	
	select date idea to view the location route, price and	
	activities done during the date.	
Preconditions:	User is at homepage.	
Postconditions:	User views a list of date ideas based on applied filters and	
	views further information on interested date idea.	
Priority:	High	
Frequency of Use:	Frequent	
Flow of Events:	<ol> <li>User selects the "Browse Ideas" option.</li> </ol>	
	2. User applies filters (e.g., price, keyword, category tag)	
	to narrow down the list of date ideas.	
	3. The app retrieves and displays date ideas based on	
	the applied filters.	
	4. User can click on a date idea to view more	
	information.	
	5. User views a map feature with location of date idea	
	and a list of information such as price and activities to	
	be done.	
Alternative Flows:	AF-S3. If no date ideas match the applied filters, the app	
	informs the user accordingly. App returns to Step 2.	
Exceptions:	-	
Includes:	<ol> <li>Get public date ideas from database to be displayed.</li> </ol>	
Special Requirements:	-	
Assumptions:	There are date ideas uploaded to the database.	
Notes and Issues:	-	

Use Case ID:	2.3		
Use Case	Share Date Idea		
Name:			
Created By:	Paviru	Last Updated By:	Paviru
Date Created:	03/09/23	Date Last	24/10/23
		Updated:	

Actor:	User (Initiating Actor)	
Description:	User can share the date idea with partner or friends. The sharing will be done through social media platforms such as Telegram, WhatsApp, or Email.	
Preconditions:	-	
Postconditions:	User shares the date idea to their intended recipient.	
Priority:	Medium	
Frequency of Use:	Frequent	
Flow of Events:	<ol> <li>User selects a date idea from their own created ideas or public date ideas they want to share.</li> <li>User chooses the "Share" option.</li> <li>The app provides options for sharing via various social media platforms.</li> <li>User selects a platform and shares the date idea with their partner or friends.</li> <li>The app processes the sharing.</li> <li>The app notifies the user that the idea has been shared successfully.</li> </ol>	
Alternative Flows:	AF-S5. If there are issues with sharing on social media (e.g., authentication failure), the app informs the user. App returns to Step 4.	
Exceptions:	-	
Includes:	-	
Special Requirements:	-	
Assumptions:	-	
Notes and Issues:	-	

Use Case ID:	2.4		
Use Case	Review Date Idea		
Name:			
Created By:	Paviru	Last Updated By:	Paviru
Date Created:	03/09/23	Date Last	24/10/23
		Updated:	

Actor:	User (Initiating Actor), Database (User Account Database)	
Description:	User can review a date idea after going through it. User can	
	provide a star rating out of 5 and also type out a review	
	paragraph of maximum.	
Preconditions:	User is logged in and authenticated	
	AND	
	2. User is at a date idea information page.	
Postconditions:	User submits a review for the date idea.	
Priority:	Medium	
Frequency of Use:	Seldom	
Flow of Events:	<ol> <li>User selects a date idea they have completed.</li> </ol>	
	<ol><li>User chooses the "Add review" option.</li></ol>	
	3. User provides a rating out of 5 stars.	
	4. User can include a written review of the date idea.	
	5. User submits his review to be posted publicly.	
	6. The app processes the review.	
	7. The app notifies the user that the review has been	
	successfully submitted.	
Alternative Flows:	AF-S6. If review cannot be processed (e.g. Too many	
	characters for review, the app will display an error message.	
	App returns to Step 5.	
Exceptions:	-	
Includes:	1. Authentication required prior to reviewing date idea.	
Special Requirements:	-	
Assumptions:	-	
Notes and Issues:	-

Use Case	Delete/Edit Date Idea		
Name:			
Created By:	Paviru	Last Updated By:	Paviru
Date Created:	03/09/23	Date Last	03/09/23
		Updated:	

Actor:	User		
Description:	User can edit or delete their uploaded date ideas. Date ideas		
·	specific to events may be outdated or unavailable, hence		
	ideas must be updated to remain relevant.		
Preconditions:	User is logged in and authenticated.		
Postconditions:	Date idea is successfully deleted or edited.		
Priority:	Low		
Frequency of Use:	Seldom		
Flow of Events:	<ol> <li>User selects a date idea they have previously uploaded.</li> <li>User chooses to either edit or delete the date idea.</li> <li>If editing, the user makes changes to the date idea details and submits the updated information.</li> <li>If deleting, the user confirms to delete the idea.</li> <li>The app processes the edit or delete request.</li> <li>The app notifies the user of the success or failure of the request.</li> </ol>		
Alternative Flows:	AF-S5. If processing fails (e.g., missing information), the app displays an error message, and the user is prompted to correct the details. App returns to Step 3 or 4.		
Exceptions:	-		
Includes:	1. Authentication required prior to modifying date idea.		
Special Requirements:	-		
Assumptions:	-		
Notes and Issues:	-		

Use Case ID:	UCX - 004		
Use Case	Plan Date Idea (*REMOV	E)	
Name:			
Created By:	Paviru	Last Updated By:	Paviru
Date Created:	03/09/23	Date Last	03/09/23
		Updated:	

Actor:	User		
Description:	User can select interested date idea and input their home		
	address, partner's address, and other locations he/she wants		
	to visit. The app will then suggest the fastest route based on		
	Google Maps route API.		
Preconditions:	User has app downloaded.		
Postconditions:	User receives a planned route with estimated time required.		
Priority:	Medium		
Frequency of Use:	Frequent		
Flow of Events:	<ol> <li>User selects a date idea they are interested in.</li> </ol>		
	2. User chooses the "Plan Date Idea" option.		
	<ol><li>User inputs the locations they plan to visit during the date, in sequence.</li></ol>		
	4. The app uses the Google Maps API to calculate and		
	display an end-to-end route from the user's location		
	to the date idea's location and other included		
	locations.		
	5. The app estimates the time required for the planned		
	date.		
	6. User can choose to discard, save or share the planned		
	route.		
Alternative Flows:	AF-S4. If the Google Maps API is unable to provide location		
	for the User input location, an error message will be		
	displayed. App returns to Step 3.		
Exceptions:	-		
Includes:	<ol> <li>Google Maps Routes API to plan routes.</li> </ol>		
	2. Google Maps Places API to get valid businesses		
	3. Share Date Idea is extended to provide option for		
	User to share route with their partner.		
Special Requirements:	-		
Assumptions:	-		
Notes and Issues:	Time estimation will be based on expected duration at the		
	intended time of date. Exact time will be unable as User will likely be planning date beforehand.
